

**BELLARINE SECONDARY COLLEGE**  
**YEAR 9 PROSPECTUS**  
**2027**

**Dear Parents / Guardians / Students,**

Welcome to the Drysdale Campus of Bellarine Secondary College.

Year 9 is an exciting time at Bellarine Secondary College as students settle into a new campus and begin to make important decisions about their futures as they move into their Later Years of schooling.

This booklet contains necessary information for students and parents/guardians to make choices from the range of electives available and provides a guide to the Year 9 curriculum.

Year 9 students undertake a combination of Core and Elective subjects. There are two semester length elective units in each Semester, which are chosen from The Arts, Technology and Learning in Community (LinC) electives. Students will complete a total of 4 electives over the year (2 in each Semester) and they must complete at least 1 Arts elective and 1 Technology elective over the course of the year. Accelerated Learning Program students will select 1 Year 10 Art and 1 Year 10 elective as a part of their school program for 2027, completing one year 10 subject per semester.

Every effort will be made to give students their first choice of electives but this is not always possible as we are restricted by class sizes and timetable blocks. Students must choose carefully as changes to subject choices are not always possible and will only be considered in exceptional circumstances.

**The key dates to bear in mind are:**

Information evening: Monday August 3rd 2026

Year 8 into 9 Course Counselling: Week beginning August 17<sup>th</sup>, 2026 (during Learning for Life class time)

Yours Sincerely,

**Mr Scott McDonald**

**Leader of Learning – Student Aspirations**

**Mr Kane Dougherty**

**Assistant Principal**

**Course Counselling**

To complete their subject selections, students will need to meet with a staff member during class time during the week August 17-21<sup>st</sup>. Students will be required to bring their pre-prepared subject selection sheet, previously completed in a Learning for Life class. It is expected that the subject selection sheet will be shared with a parent/guardian, utilising this prospectus, prior to their subject selection day.

When all students have entered their Course Selections at Course Counselling, the information will be used to generate subjects for the 2027 College year. Students will receive a copy of their selections that parents will need to sign and return to the Ocean Grove office.

Students will be notified of their 2027 curriculum in late Term 4, before their Year 9 orientation commences.

**Any queries should be directed to Mr Andrew Grimshaw at the Drysdale Campus, or Mr Dave Mitri at the Ocean Grove Campus.**

## SEPEP

|                               |                                                                |
|-------------------------------|----------------------------------------------------------------|
| <b>Title:</b>                 | <b>SEPEP - (Sport Education in Physical Education Program)</b> |
| <b>Compulsory / Elective:</b> | <b>LINC</b>                                                    |
| <b>Contact Person:</b>        | <b>Mr Tom Stokes</b>                                           |

**COURSE AIMS:**

SEPEP is an approach towards teaching physical education that aims to maximise involvement and deepen understanding of sports by giving students dedicated roles outside of just participation. It seeks to develop leadership and other interpersonal skills valuable to all aspects of life. Some of the roles that students can undertake include; coach, publicity manager, film crew, statistics, umpire, timekeeper, scoring, devising the draw.

**COURSE CONTENT:**

SEPEP (Sport Education in Physical Education Program) is based around the philosophy that community sport involvement (structured teams and competitions) has the potential to breed in its participant's dedication, competence and commitment as well as physical, social and cognitive skills. In this program, students are put in the driver's seat – they elect their own managerial board (called the sports board), they fulfil the roles associated with officiating a sports competition (ie – umpires or referees, publicity officers, equipment officers, coaches and captains), and they also determine the rules of the game that is to be played, and the details of the competition season. Students will develop these skills throughout the term and apply these skills when peer teaching or potentially when hosting students from some of our partner primary schools.

| <p><b>COURSE AIMS:</b> In year 9 Ceramics and 3D Art, students learn a range of fundamental hand-building techniques. They learn about the qualities of clay and other media while constructing ceramic and mixed media forms. Students learn how to use the studio process to develop their ideas into 3D forms while responding to sculptures from different times and cultures. Students also complete a range of research tasks in response to themes explored in class.</p> |                            |

| <b>COURSE AIMS:</b><br><br>Students will continue to build on their prior learning and experiences in listening, rehearsing and performing music. They use music knowledge and skills in purposeful and creative ways that are informed by their engagement with the work of living composers and performers from local, regional, national and global contexts.<br><br>Year 9 Music is your opportunity to explore, collaborate and perform music while developing your own unique musical voice. Students explore music from a range of cultures, styles and contemporary artists, using these influences to arrange and perform music. Drawing inspiration from contemporary musicians and diverse musical traditions from Australia and around the world, students discover how music connects people, cultures and ideas. |                          |

| <b>COURSE AIMS:</b><br><br><p>The Year 9 course is based on Product Design and the Communication Process.</p> <p>Develop your creativity and design thinking as you explore how visual communication shapes the world around us. In this subject, you will generate and refine design ideas, experiment with a range of materials and digital media, and create visual solutions for real-world communication needs. You'll learn to apply the design process, reflect on your creative decisions, and present work tailored to specific audiences and purposes.</p> |                                    |

**COURSE CONTENT:**

- Layout
- Typography
- Signage
- Technical drawing
- Product design
- Promotional graphics
- Research assignment

Students will be encouraged to use practical means of presentation such as:

- Paint
- Gouache
- Pencil
- Ink
- Cut paper
- Photoshop

| <b>COURSE AIMS:</b><br><br>Food Technology involves using knowledge, skills and attitudes to produce food products that meet people's needs and desires.<br><br>In this course, students will be introduced to designing and working with food, applying safe and hygienic food preparation, appropriate terminology and working with a design brief. There is a sound nutrition focus with links to food models, nutrient content and requirements for growth and activity. Students will be challenged with questions, investigations, newspaper articles and case studies. It is expected that from this, students will develop an appreciation for food by investigating and working with food. |                      |

| <b>COURSE CONTENT:</b><br><p>In this course students will be introduced to fashion drawing, working with fabric, understanding patterns and correct equipment use. They will complete several sewing samples and drawings which will be maintained in a display folio. There will be a focus on the correct and safe use of both hand and machine equipment. Commercial patterns will be used in the construction of garments and accessories and students will be encouraged to make decisions on appropriate construction skills and finishing techniques. Students will also complete research into the Textiles industry.</p> |                              |

| <b>COURSE AIMS:</b><br><p>Students will gain a basic understanding of electronics and robotics. Students will be able to apply these skills to construct working robots of their own design.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                          |
| <b>COURSE CONTENT:</b><br><p>The Robotics classroom is run as a Learning Centre. Students are able to choose their own robotic challenges depending on their skill level and learning styles. Students are given a range of hundreds of activities to choose from, obtained from prepared curriculum materials or from specialist robotics web sites on the internet. Students are able to construct their robots using their own Mindstorm NXT Kits and a range of other building materials. Robot designs include humanoid robots, remote control cars, Ninja fighting robots, tracked vehicles, service robots, soccer robots and dancing robots just to name a few. Students can program the robots to behave autonomously or using Bluetooth control, using a joy stick or even mobile phones.</p> |                          |

| <b>COURSE AIMS:</b><br><br>The course consists of a wide range of activities and practices, which develop student competence and confidence in using language.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                             |
| <b>COURSE CONTENT:</b><br><br>The course is assessed in 3 modes: <ul style="list-style-type: none"><li>• Reading and viewing –Students are encouraged to read widely and with discrimination. The course incorporates study of set texts, novels, short stories, plays, films as text, poetry, newspapers and other media.</li><li>• Writing – Students are encouraged to develop control of the writing process by choosing and developing topics, drafting, revising, editing, presenting to an audience and participating in the evaluation of their work. Students engage in a range of different types of writing. Tasks are designed to allow students to build on the skills already developed in previous years, as well as to introduce them to the writing of arguments, instruments, reports and reviews.</li><li>• Speaking and Listening – Emphasis is given to using speech in a clear, controlled and expressive manner. Students are expected to participate in discussions, debates, formal and informal talks and various other activities designed to enhance speaking skills. Exercises and activities that stress the importance of thoughtful, critical, attentive, and appreciative listening are presented.</li></ul> |                             |

| <b>COURSE AIMS:</b><br><br>To further develop student ability across mathematics topics such as measurement, space, algebra and probability, including new topics and those previously taught in Year 7 and 8.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                           |
| <b>COURSE CONTENT:</b><br><br>Year 9 Mathematics builds on students' understanding across the strands of the Victorian Curriculum: Number and Algebra, Measurement and Geometry, and Statistics and Probability. Throughout the course, students further develop their mathematical reasoning, problem-solving, and critical thinking skills by applying mathematics in a range of, skill based, real-world and investigative contexts.<br><br>Students extend their understanding of measurement through the study of Pythagoras' Theorem and an introduction to trigonometry, using these concepts to solve practical problems. In Number and Algebra, students strengthen their algebraic skills by exploring linear relationships, indices, and their applications, while continuing to build confidence in solving equations and analysing patterns.<br><br>A scientific calculator is required for this course to support learning and assessment. Students are assessed through a combination of Core Skills and Problem-Solving tasks. They are encouraged to challenge themselves by engaging with rich mathematical investigations, open-ended questions, and authentic problem-solving activities that promote deeper mathematical understanding. |                           |

## SCIENCE

**Title:****SCIENCE****Compulsory / Elective:****Compulsory****Contact Person:****Mr Jackson McCaffery****COURSE AIMS:**

The Year 9 Science course builds upon the scientific knowledge and skills acquired in Year 8 Science, to further develop student understanding of the world in which we live and the important role science plays in developing a sustainable future. The course is design is composed of integrated units covering Biology, Physics, Psychology, Chemistry and Environmental Science. This course requires an online software program and work book

Excursions/incursions are organised each year.

**COURSE CONTENT:**

Topics include:

- Sustainable Futures
- Consumer Chemistry
- Sport, Motion and Human Performance
- Body and Disease
- Ecosystems and Organisms

## HUMANITIES

*There are four subjects studied in HUMANITIES:*

- Economics and Business, History, Geography, Civics and Citizenship

## BASKETBALL PROGRAM

**Title:****Basketball Program****Compulsory / Elective:****Elective****Contact Person:****Steve Carlson****COURSE AIMS:**

The aim of the Basketball Program is to provide students the opportunity to focus specifically on developing their knowledge, skills and understanding of this very popular sport. Students will develop their individual skills and knowledge as well as team concepts to enhance their on-court performance, while fostering attributes such as sportsmanship, teamwork, communication and leadership to develop as a person and a player.

While the program will support students to be more accomplished basketball players, it will instil the College values of respect, responsibility and resilience and enhance student discipline, dedication and perseverance.

The course also aims to connect and engage students with their academic learning by leveraging their interest in Basketball to enhance their application and engagement in their learning more generally and by developing the learning behaviours which will support academic achievement.

Note that there will be a limit of one class for the Basketball Program at Year 9 in 2025. Students selected for this program will remain in this class for most other subjects (except electives at Year 9). Given this program is in addition to other classes studied at Year 9, the program for students at both Year 9 in 2025 will involve:

English (5ppw), Maths (5ppw), Basketball Program (4ppw), Science (3ppw), Humanities (3ppw), Languages (3ppw), Art (2ppw), Technology (2ppw), HAPE (2ppw and Learning for Life (1ppw).

This is different to all other classes with Art, Technology, HAPE and Learning for Life being 1 less ppw to create the timetable space for the Basketball Program.

**COURSE CONTENT:**

## Individual Skills

- Dribbling
- Shooting
- Passing
- Rebounding
- Defence
- Footwork

## Team/Strategy/Concepts

- Team Defence
- Offensive structures
- Transition offense/defence

## Knowledge/Basketball IQ

- Rules/Refereeing
- Coaching
- Decision making

Please note that there are costs associated with this program related to numerous excursions and incursions. These details will be shared at the Parent Information session which will be conducted for interested students and their families.
